

## ABSTRACT OF THE DISCLOSURE

An adhesive and material dispenser for dispensing single sheets of material from stacks of sheets of material or from rolls of material and applying an adhesive to the sheet. The adhesive is applied by contacting the adhesive portion of an adhesive transfer tape to the sheet. The sheet of material with the adhesive applied thereto can be used to wrap floral arrangements or flower pots or other articles. The dispenser may be combined with an automatic pot wrapping apparatus so the adhesive application and decorative pot wrapping sequence can be combined into one continuous operation.
